

Arduini Legnami Spa is established as one of the leading timber importing companies in the European market.

We have been importing logs since 1957 from the most important markets in the world such as West Africa, North America, Canada, Northern and Eastern Europe. Our products include African timber, walnut and European oak.

At our facility, based in northern Italy, we treat logs and turn them into lumber of various thicknesses and widths and then re-sell lumber according to customers' specifications (fixed width, ripped, unripped, steamed and KD)

We are also specialized in trading Sapelli, Tiama, Ebiara and other West African timbers, and European timber (like ash and Oak).

We are FSC, PEFC certified (as most of the products we trade are), and work in full compliance with the "EU Timber Regulation".

We would be pleased to provide you with further information about our business or work out an offer that will meet your requirements.
